

Tessier on the path of Quebec's diamonds

In the heart of James Bay's Otish Mountains region, 350 kilometers northeast of Chibougamau, you'll find Tessier Ltd. cranes at Camp Lagopede, working on the Renard diamond project run by Stornoway Diamonds (Canada). This project is Quebec's very first diamond mining project.

A 65-ton Grove RT-765 model crane has been on site since the earliest phases of the project in spring 2013. It has mainly been used to unload supplies and set up temporary facilities.

Two additional pieces of equipment were added in the summer of 2014—a 53-ton Terex BT-70100 boom truck and a 220-ton Demag AC 200 hydraulic crane.

Construction on the initial facilities is completed, and the camp is ready for workers who will carry out the rest of the work.

Qualified training for RT9150E crane operators

In December 2014, working with ACRGTQ, we provided training for operating Grove RT9150E cranes. This "picker" style crane requires a high level of technical proficiency to be able to operate at maximum capacity.

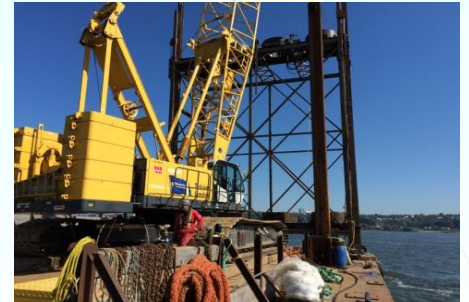

The weeklong training session was given to three crane operators, and will now be a requirement for any operator working on this type of equipment.

This will ensure Tessier Ltd. has workers trained to operate a versatile crane model with a 197-foot boom that makes it as useful on construction sites as on erection projects.

Marine construction at the Port of Québec

Since early fall, a 160-ton CK1600-II conventional crawler crane has been at work reconstructing the *Quai de la Reine* pier on the St. Lawrence River.

This versatile crane has been used to set up jigs and fixtures and install pilings and sheet piles. A hydraulic vibratory hammer was suspended from the crane to carry out this work.
